Introduction

Workshop provides a microworld in which to discover what each of the program's amazing 'machines' can do with simple shapes. Users will set their own aims, developing their plans and experimenting as they explore alternative methods of working. Strategies can be examined during the lively replay sequences on the LOOK page. Experiments can be immediately reversed by simply pressing the DELETE key, so trying things out is recommended. In the microworld of Workshop there will always be new shapes and new things to try – and finding out is fun.

The program uses a small number of words and symbols that can be easily found on the computer keyboard. Additionally the function keys have picture-labels and each machine generates its own particular sounds, so Workshop will serve as an amusing and imaginative introduction to the computer for young learners from the age of three upwards.

Getting started

Loading the program

To load and run the program place the cassette (fully rewound) in the cassette recorder, type

CHAIN "WSHOP"

and press RETURN; the 'Searching' message should appear on the screen as you do this. Now press the PLAY button on the cassette recorder and wait for the program to load. The title page will load in less than one minute and the main program will take a further five minutes to load. The program will start as soon as loading is complete.

Sound

The program begins on the SHELF page with the sound option on. Pressing Q will switch the sound off; S will restore it. Sound may be switched on or off whenever you return to the SHELF page.

Function key card

This is placed at the top of the computer keyboard. If you lose your function key card you can make a new one. Simply ensure that the name and symbol for each machine lines up above the following keys:

	DRILL	
	PAINT	
	NOT	
	SCALE	
	CUT	
	SQUASH	
	GLUE	
	ROTATE	
	LOOK	
	SHELF	

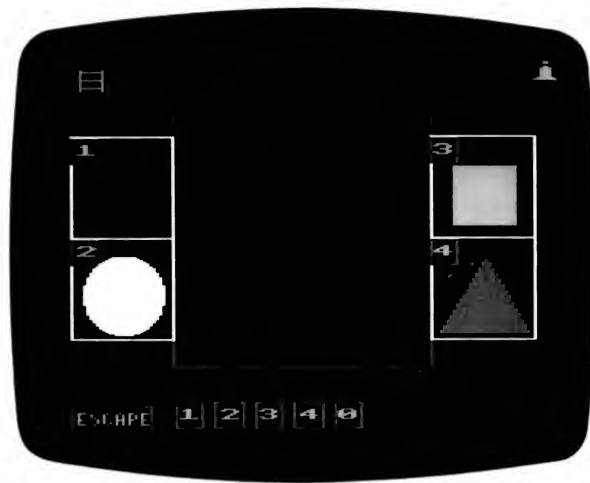

In the workshop

Workshop is designed for experimentation. There is no right or wrong way of working and surprising effects can be achieved. This section gives details of a planned method of approach that you may wish to follow. Others will prefer the challenge of exploring the workshop on their own.

There are four main 'pages' or operating areas: SHELF, PLAN, MACHINES and LOOK.

Shelf page

The SHELF is in front of you when you enter the workshop.

You may select a shape (circle, square or triangle) from one of three boxes that contain shapes, by pressing number key 2, 3 or 4. The shape chosen will then be placed in the main box:

DELETE cancels your choice

RETURN confirms your choice

If you confirm your choice you are given further options before you leave the SHELF page:

Number key 1 moves the chosen shape from the main box into box 1

Number key 0 empties the main box

Number key 2, 3 or 4 will now place another shape in the main box

If number key 1 is pressed when both box 1 and the main box are full, the shapes will be exchanged

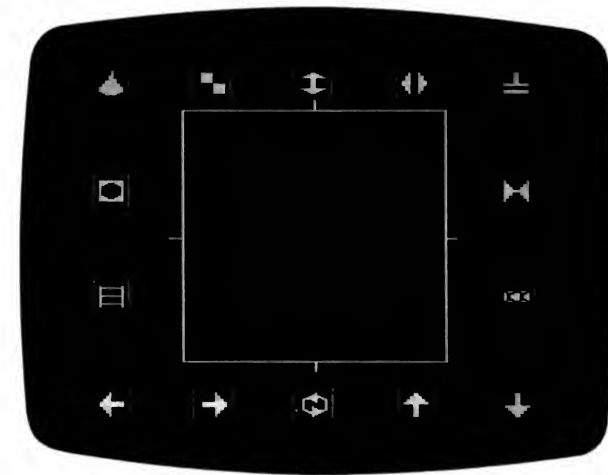

COPY enables a shape in box 1 to be copied into the main box. This option becomes available immediately after number key 1 has been pressed

DELETE allows you to undo the last action

ESCAPE takes your chosen shape from the main box to the PLAN page

Plan page

The chosen shape remains in the main box. Symbols corresponding to those on the function key card surround this area and show the machine options.

At this point it is possible for you to **ROTATE** the shape in the main box (by pressing the labelled function key) and move it **UP**, **DOWN**, **LEFT** and **RIGHT** with the arrow keys. The shape can then be taken to a machine by pressing a labelled key.

You can return to the SHELF at any time from the PLAN page or select the LOOK page.

Machine pages

Each machine page shows the chosen shape in the main box and the machine's symbol in the top left-hand corner. Operating options are shown at the bottom of the screen:

- RETURN sets the machine in motion
- DELETE undoes the machine's operation
- ESCAPE transfers the shape (in its current state of working) to the PLAN page where further options may be taken

The machines:

The drill bores a hole at the centre of the main box. The positioning of shapes will have taken place on the PLAN page. The size of the drilled hole is increased with each press of the RETURN key.

The painting machine paints the entire shape in one of seven colours: red, green, yellow, blue, purple, light blue and white (R, G, Y, B, P, L and W). A colour change may adjust the colours of other pages too.

The NOT machine acts like a mould which surrounds the chosen shape. The mould will be the new shape.

The UP and DOWN arrow keys are used to enlarge or reduce shapes. There may be some simplification of shapes during this process.

The cutting machine positions a blade over the shape and cuts down in a straight line. The blade may be moved to the left or right using the arrow keys. The section to the right of the blade is discarded.

The squash machine can squash or stretch. The DOWN and UP arrow keys are used to show whether the shape is to be squashed or stretched. All parts of the shape are affected.

The glue machine is used to glue any shape in box 1 to any shape in the main box. The shape from box 1 will be on the right and the shape from the main box will be on the left. Both shapes are scaled down.

Look page

A record of the sequences of operations is kept automatically. It may be referred to from the PLAN page whenever required. A series of symbols shows the pages which have been visited so far. The processes which occurred on each page have been stored as a sort of 'program':

- RETURN enables you to run this 'program'
- DELETE will clear the LOOK page
- ESCAPE takes you to the PLAN page

You will hear a warning tone if the computer does not have enough memory left to record further processes. A flashing LOOK symbol will also appear on the right-hand side of the screen. The LOOK page may not appear to be full when this warning is given if some of the symbols shown represent more than one process. Normal working can continue when the LOOK page is full but further processes will not be stored until the LOOK page has been cleared with DELETE.

Workshop

ACORN **SOFT**

Note: This program can also be used with the
BBC Microcomputer Model B.
